

The heart of Akat-Folia is our expert knowledge reached through many years' experience and the main force of our company is our determination to be the best and offer the highest quality products for constantly increasing amount of customers throughout Poland and UE.

PROMOTIONAL LABELS

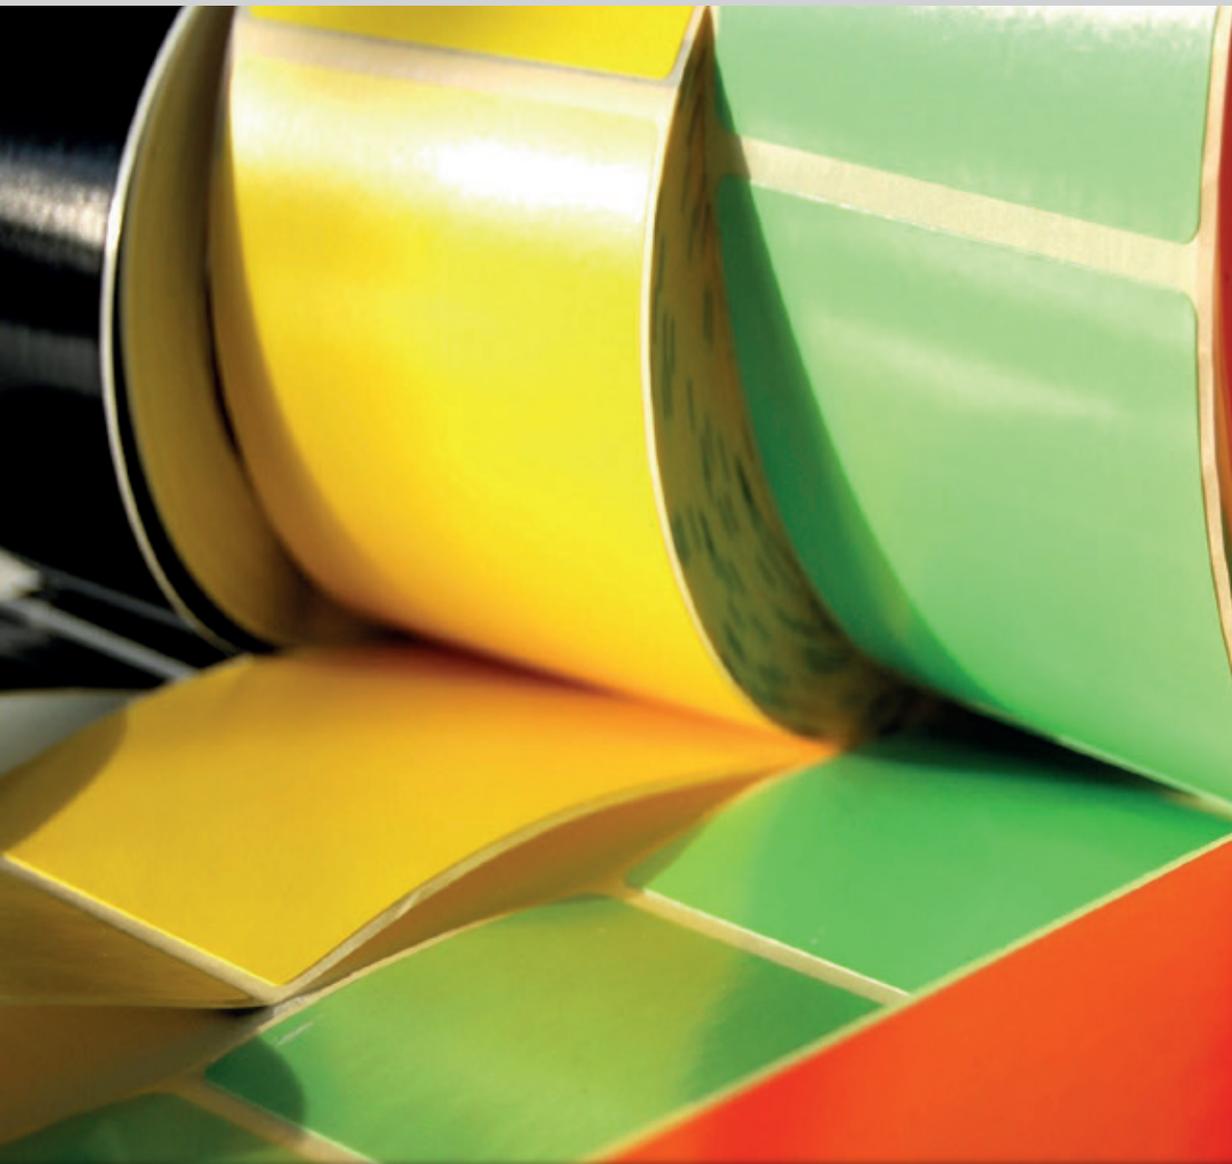

The main purpose of promotional labels is to single out your product. They can be made of fluorescent paper – that can additionally call customer's attention.

They include information about promotion, special price or other means of marketing media.

DECORATIVE LABELS

The basic use of multicolour labels is keeping consumer's attention on the product. That is why the label should have an interesting layout, quality and technique. There are many decoration methods and materials used to achieve it. You can use glossy paper with texture or imitating some other materials.

MONOCHROMATIC LABELS

Monochromatic labels – they are mainly designed for later printing. They are used for signing particular production consignment and they can also be used for storehouse identification. Of course it is only an example of use. There are many other ways of using it depending on your needs.

EASY TO PEEL LABELS

Thanks to using special property glues those labels you can unstick it without leaving any mark on a product. They contain the manual, information of product use, etc. They are widely used in electronic trade.

TRANSPARENT LABELS

Labels named „no label look” produced with high – transparent materials make an impression of being put directly on wrapper but also the quality of printing is significantly better than direct print on a surface. And what is more – the price of those labels is lower than printing the wrapper. Labels are also highly resistant to compression, pollution and humidity. They are used mostly in cosmetic and food industry, the most often on Premium products.

LABELS FOR COSMETICS

Labels made for cosmetics trade are known for high quality. Their mean is to make the product unique. There are used materials of high transparency, metalized, very often made with silver plating and gilding, shining or matt varnish and other decorative techniques. Those labels are resistant to dirt and humidity.

SPECIAL PURPOSE LABELS

This group of labels is made of highly specialized materials. Because of the variety of use we can mention guarantee – seals, name plates, protection labels (e.g. VOID, PE, PVC), masking labels. Protection labels are used as a protection against the unauthorized interference in a product or from falsification.

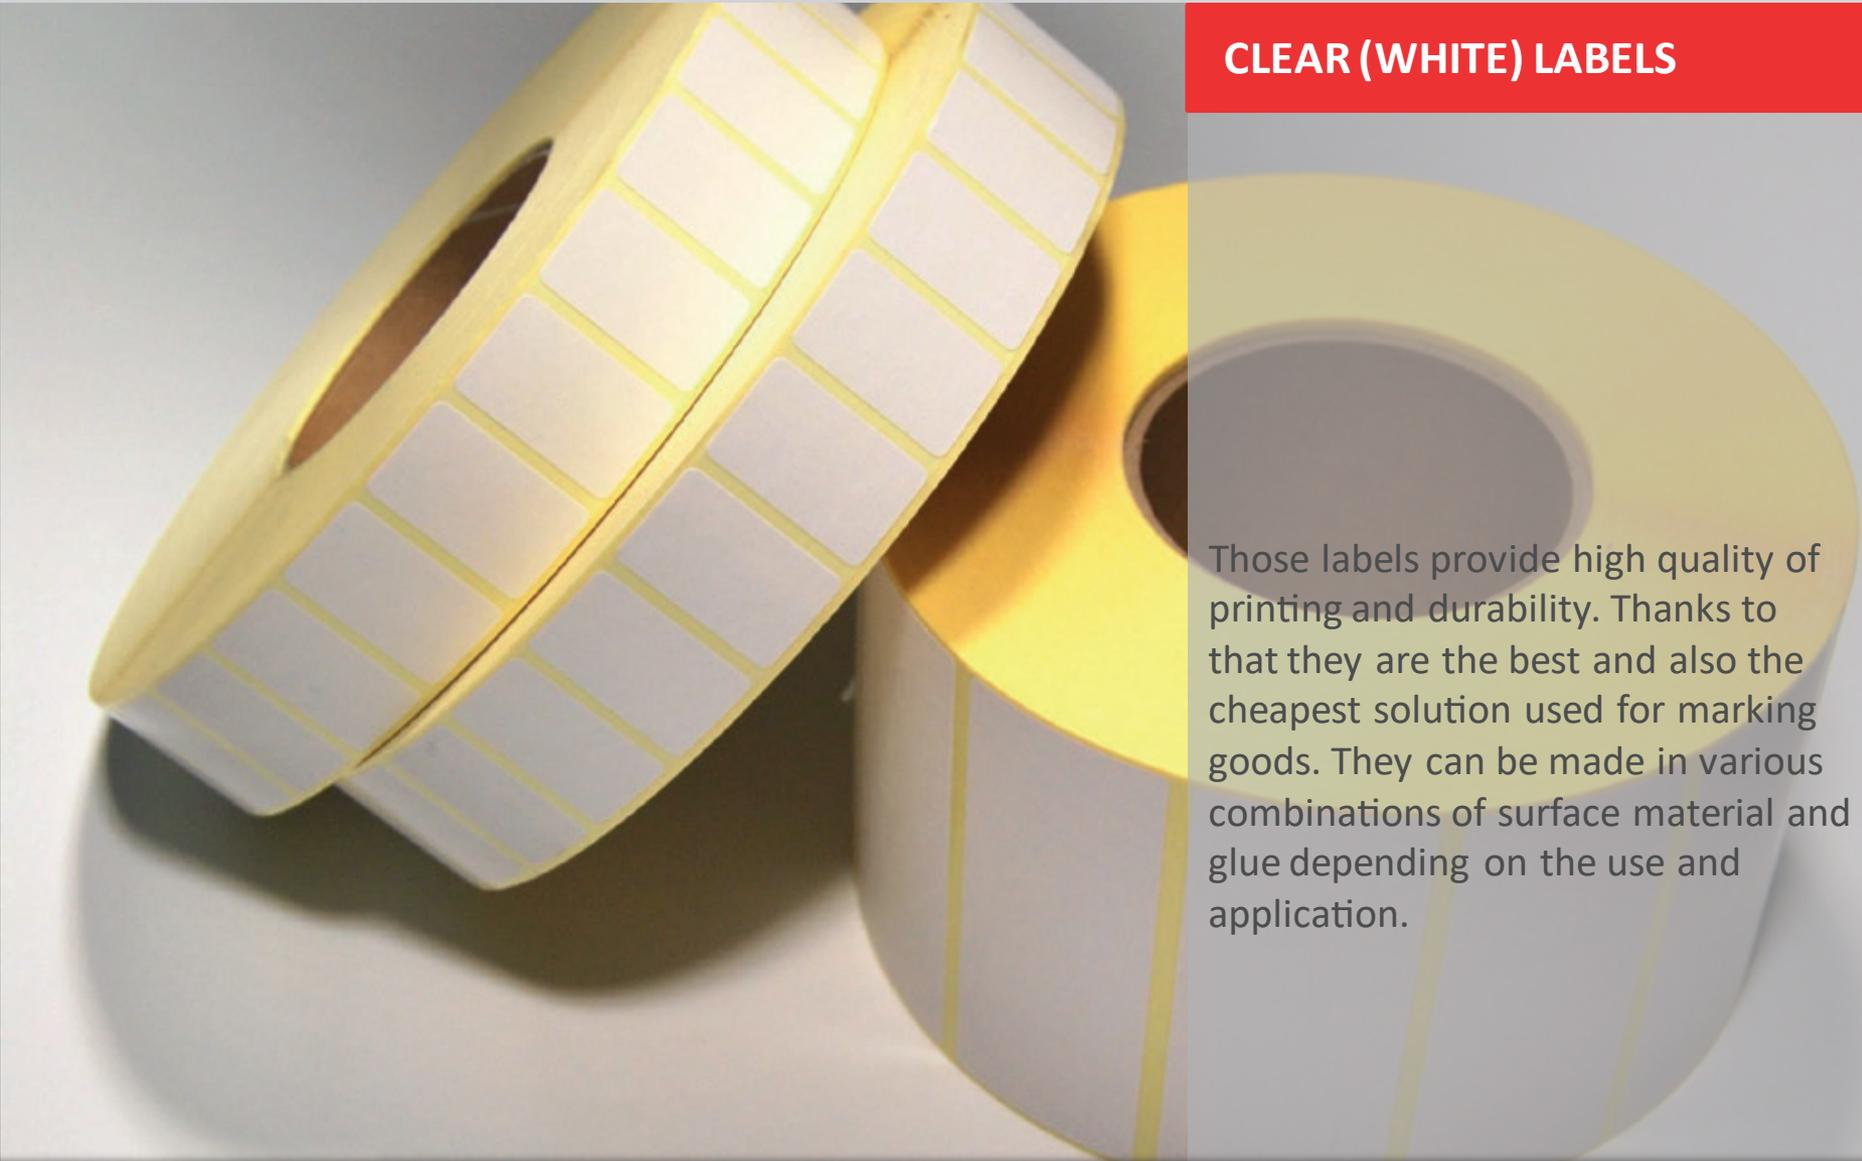

LABES FOR INDUSTRY

In that group we can mention for example warning labels that are used for signing devices. They give information about the consequences of wrong use or content of dangerous substances.

CLEAR (WHITE) LABELS

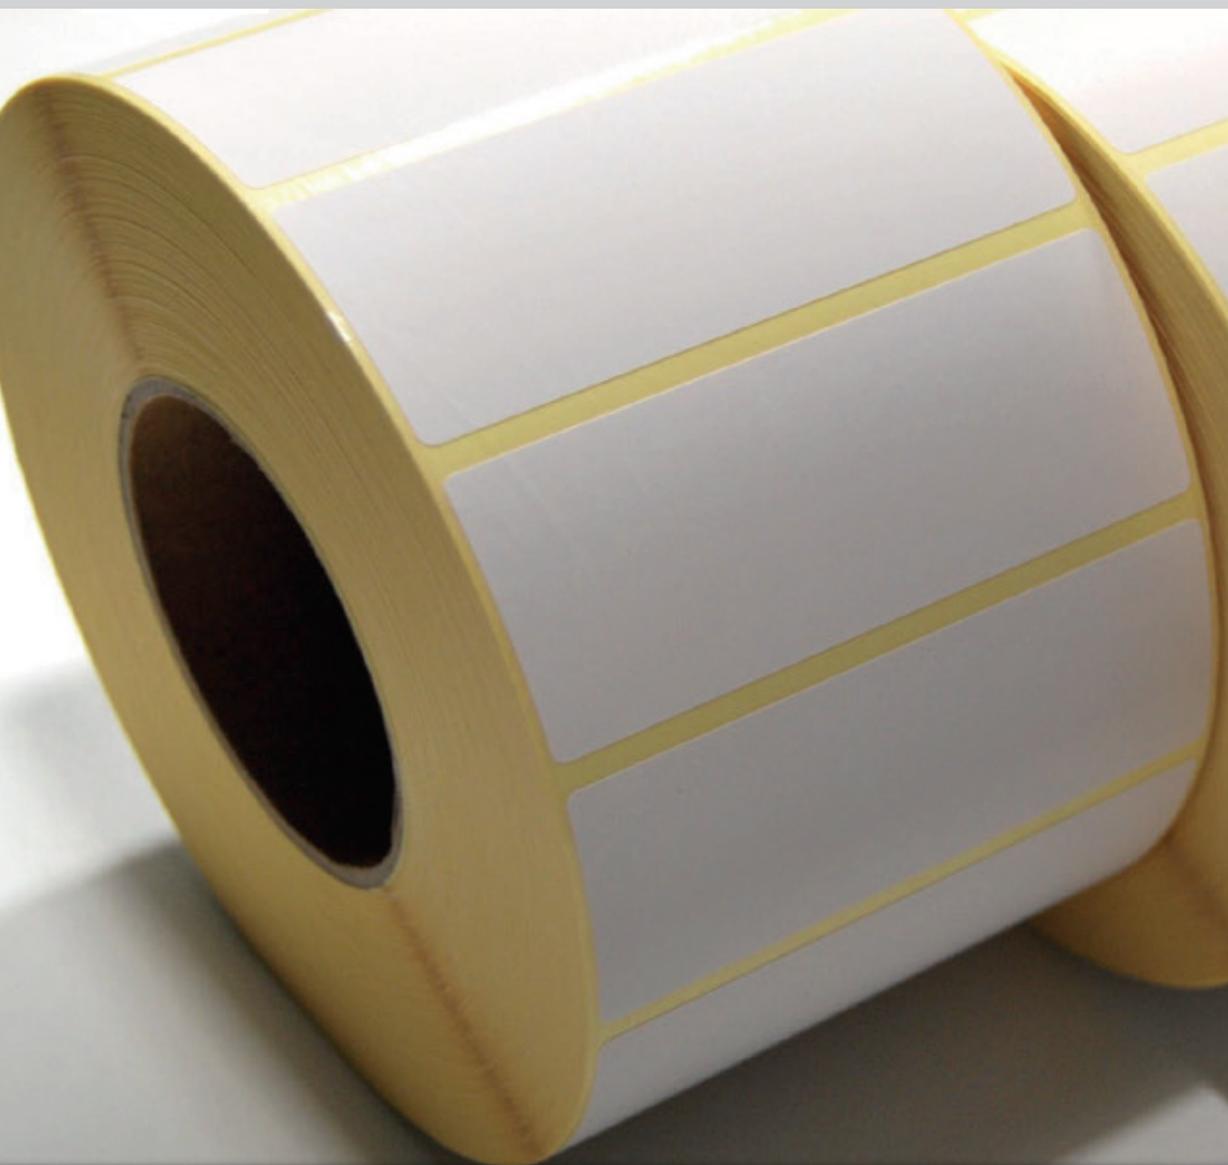

Two rolls of clear (white) labels are shown against a light grey background. The roll in the foreground is partially unrolled, showing a grid of rectangular labels. The roll in the background is more obscured. The labels are white with a clear adhesive backing.

Those labels provide high quality of printing and durability. Thanks to that they are the best and also the cheapest solution used for marking goods. They can be made in various combinations of surface material and glue depending on the use and application.

LOGISTIC LABELS

Logistic labels are used in identity systems. They can contain the product and receiver data and also the bar code. They provide quick control and localization of a unit. They are mostly made of thermal, half – glossy or matt paper. We also recommend the labels made on film, that are more resistant to external conditions.

LABELS FOR SCALES

Labels for scales are thermal labels – white or with an initial printing. They are used for all labelling scales available. They can be mostly found in food industry and also in shops with self – service scales and supermarkets. They contain information about the name of a product, weight, price, edibility. They are often used with barcodes.

TT RIBBONS

Thermal – transfer ribbons provide printing of information, graphics and bar codes on labels. The proper choice of a ribbon has a direct influence on the quality and durability of the printing. Wax ribbons are perfect for paper surfaces. Resin and wax – resin ribbons have more durable printing and are used mainly for film labels.

WRAPPING RIBBONS

One – colour wrapping ribbons are standard used to paste over the cardboards. They are available in colours : colourless, brown, white, green, blue, red, black and orange. Wrapping ribbons with a printing - a well visible and at once cheap form of advertisement. The printing is made on the glue – side so it is very durable
